Must haves for your [chicken coop](#)

Just like humans, chickens are unique. Not all chickens are made equal and similarly, and so as their chicken coop. when you are out planning for a coop, there are factors that you have to take into consideration. You have to consider how many chicken you got, what the chickens are for, or if they are going to be pets, or some accommodations the chickens have, or on how you are going to get to their eggs.

Knowing all these things are very important and have it answered before you begin building your chicken coop. it is also important that the number of chickens that you keep is limited to your yard's dimension. You can keep five, or even more but however the coop must be built in such a way that it can accommodate the amount of chickens you plan to have.

It is highly important that the chicken coop plans is sturdy enough or else your chickens can become stressed and pissed off when it comes to laying their eggs patterns. In cases where you are raising chickens just for the eggs, then you have to never interrupt their habits because this can distort their habits and in turn, deliver you eggs that are not of great quality.

There is basically three chicken shacks that you can build. You can choose either little, medium or big. You will then decide to build the coop in two alternative ways. The primary way is that you build it with an A-shaped roof as this kind of roof is decent and lasts for a bit longer. This too will allow rain and snow to run off the top. However, this type seems to be a bit expensive and will require you to need more wood.

Moreover, having an A-shaped roof for a chicken coop will permit your chickens not to hit the ceiling quite as much. A rook that is flatly build will collect more snow and rain and this somehow will cause the roof to collapse. To prevent this incident, ensure that you position it an angle that will ward off snow and rain itself.

Small coops are best when you have to keep two or three chickens. These coops may consist of a small fence enclosure with a small indoor area that allows sleeping two or three chickens. This is also less costly and is best for chickens as pets. Medium coops on the other hand are bigger compared to the latter and this houses at least five to ten chickens. It can be converted into an old shed or this can be made from nothing but they match the basic elements needed for chicken coop designs.

Lastly, big coops are always great for all chickens as this accommodates a huge number of them. Chicken coops appear to be chickens house and they will surely enjoy living in theses. So you have to provide a chicken coop that allows comfort for them. For chicken coop plans, if you want to access eggs fast, then you can build a strategy in retrieving the eggs in an easy way without going to the coop. a door outside the coop that opens the nesting boxes is a great idea. Just make sure that you don't forget to check frequently the conditions of the coop.
